

Das picobello Workbook 3

The Saar Waste Disposal Association takes care of the waste collection in many places in the Saarland. It also contributes to generating less waste. By campaigns, online information, and brochures. One new brochure is the picobello Workbook 3. This workbook can be used by everyone, children and adults.

What it is about: Many things we buy are made somewhere else. Garments, for example, or food items. Other people need to work hard for that. The long transport stresses plants, animals and habitats. This is also tangible for us. By way of climate change and other environmental problems. We cannot carry on this way. Which is why the governments have decided 17 UN Sustainable Development Goals. One important goal is to buy less. And to treat what we buy differently. So that no new waste is generated.

How to go about this? The picobello Workbook 3 offers many ideas: using garments longer. Not wasting food. Sharing electrical appliances. Passing things on to others as gifts. Thinking about what you need before you go shopping. And how much of it. Finding out where things come from beforehand. If many people in the Saarland do this, everybody can have a better life on earth. – Join in and contribute!
